*The Dark Side of the Milky Way*

*Only since Hubble in 1922 has human civilization become aware of its home and place in the Milky Way Galaxy grand stellar constellation -- with 200 billion+ stars, 270 million year period of revolution, 100,000 lightyear length, and massively energetic center. The Galaxy: A new human domain, enormous and immense, yet finite enough for human understanding and familiarization -- multi-billions larger than our solar / star system, yet sub-microscopic in the cosmic infinity.*

The Galaxy Forum is a proof of concept exploration which seeks to confirm and actualize Galaxy Education in the 21<sup>st</sup> Century as an energizing, central focus and way forward for us today and for future generations.

*This free event is open to the public. Seating is limited. Please [reserve your place](#) today.*
